Immy Yousafzai

Trading systems and AI agent engineer · MQL4/MQL5, MetaTrader, TradingView

Birmingham, UK (remote) · imyousafzai.com (case studies and contact form) · github.com/immy2good · itradeaims.net

PROFILE

I build and run commercial trading software. Since 2011 I have run iTradeAIMS, which sells 21 indicators and 8 Expert Advisors for MT4, MT5 and TradingView to 500+ customers, through a platform I built for payments, licensing and member access. I build with AI coding agents through AIMStack, my own software factory: specs go in, agents write and cross-review the code, and nothing ships without evidence. Open to UK remote roles in trading technology, AI automation and agentic systems, and to freelance work.

SELECTED WORK

Each project has a full case study at imyousafzai.com. The code is private.

Banana EA: rebuilding a flagship trading robot for MT5

Owner, product lead, developer · MT4 product since 2017 · MT5 rebuild Sep–Oct 2026

- An audit of the MT4 engine found 23 defects; the MT5 rebuild fixes each one behind a failing test first.
- Headless engine suite with 1,416 assertions; 122 commits, 33 merged PRs, 4 written architecture decisions, 6 robustness stages before any release.
- MT4 6.6 sold to customers; MT5 7.0 in demo validation.

EA and indicator licensing for MT4/MT5

Owner, architect, lead developer · May 2026–present · live with paying customers since June 2026

- Server-side licence system: one-click activation, per-install credentials and signed short-lived licences checked by a C++ library (64-bit MT5 and 32-bit MT4 DLL builds).
- 841 commits, 243 merged PRs, 31 written design decisions, 170 automated test files, 15/15 crypto test vectors passing in CI.

Confluence Pack for MT5

Owner, architect, lead developer · Sep–Oct 2026 · version 5.1.0 released 23 October 2026

- Four analysis indicators and a dashboard that reads them all, installed as one file.
- Every rule replays against recorded prices and is compared byte for byte with 6 golden test suites; full check under 5 minutes before any merge. 567 commits in about four weeks, 15 design decisions.

AIMStack: the software factory behind iTradeAIMS

Designer and operator · October 2025–present

- The production line that built the licence server, Banana EA 7.0 and the iTradeAIMS website.
- AI agents write and cross-review code in isolated workspaces across 4 AI coding tools; 33 skills in 4 plugins and 15 evidence rules; I make every decision that matters.

EXPERIENCE

Founder and lead developer, iTradeAIMS

Birmingham, UK · 2011–present

- Built and run the commercial platform: Stripe, PayPal, Paid Memberships Pro, Amazon SES and TradingView access, with routine delivery running without manual handling.
- Published on TradingView since 2014; taught on YouTube, where the iTradeAIMS channel has 537 videos.
- Quant research pipeline in Python and PyTorch with leakage tests, exporting models to ONNX to run natively in MT5.
- MCP support automation (now retired): two MCP servers with 37 tools let an agent work Discord tickets, support email, membership, CRM and TradingView access, with every customer-facing send confirmed by me first. About 96 real support jobs, 63 passing tests.

Trading domain lead and MQL4/MQL5 developer, ChartBridge (BrumByte)

Birmingham, UK

- TradingView-to-MetaTrader bridge built with a small team. Owned the MT4/MT5 EAs and MetaTrader integration, contributed to the React/Next.js front end, and tested the full signal path end to end.

Earlier career: director, family businesses

Mardan, Pakistan · before 2011

- Marble tile manufacturing (founded and ran it, 20+ employees), a commercial cold storage facility, and Gandaf Flour Mills. Procurement, production, licensing, budgeting and customer contracts.

SKILLS

Trading	MQL5, MQL4, MetaTrader 4/5, Expert Advisors, indicators, Pine Script v6, Strategy Tester, EA licensing, MT4 to MT5 conversion, parity testing
AI engineering	Claude Code, Codex, Cursor, Gemini, Grok, Antigravity, MCP, multi-agent orchestration, agent memory, guardrails, human-in-the-loop, spec-driven development, TDD, code review
Web and platforms	Python, PowerShell, TypeScript, React, Next.js, Laravel, PHP, WordPress, Stripe, PayPal, REST APIs, webhooks, Amazon SES, Docker
Open source	baton, my open-source relay used by the agents in AIMStack: github.com/immy2good/baton

EDUCATION

- BSc Computer Science (in progress), University of London (online), 2024–present
- MBA (Marketing), Institute of Management Studies, Peshawar
- BBA, Preston University, Peshawar campus
- BA (Law and Political Science), University of Peshawar
